

The Super Bikeway

The super bikeway in Umeå municipality is a bicycle path with a higher standard than other conventional bicycle paths in Sweden. The superiority is in its dimensions, secured crossings, separation of bikes and pedestrians and in its interconnections to other bike paths. The bicycle path is also straighter and wider than the conventional bicycle path.

In Umeå the project was financed by the Swedish Environmental Protection Agency and Umeå municipality. The aim of the bicycle path is to decrease CO2 emissions by increasing sustainable transport.
